EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Clifford J. Mass on February 26, 2009.

The application has been amended as follows:

In the Specification:

Please replace the Abstract of the Disclosure with the attached Abstract (see below).

In the claims:

68. (Currently Amended) An animal feed supplement comprising a complex of a divalent metal carboxylate and an aminoate or hydroxyl analog thereof, wherein a the bioavailability of the divalent metal in the complex is better than the bioavailability of the divalent metal in the carboxylate alone.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The primary reason for allowance of the instant claims is based on Applicants' convincing arguments filed January 13, 2009. The Examiner agrees with Applicants the instant claims, particularly claim 53, recites three distinct process steps and therefore is distinguished from the combination of US'815 and US'055 in view of Ericson et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the

ABSTRACT OF THE DISCLOSURE

A process for preparing a feed supplement that promotes growth in animals by (i) preparing a dry metal carboxylate of formula $M(RCOOH)_2$; (ii) preparing a metal aminoate; and (iii) mixing the dry metal carboxylate and the metal aminoate under conditions that form a complex including the metal carboxylate and the metal aminoate and water, then removing the water to form a dry metal complex of the metal carboxylate and the metal aminoate. When administered to an animal in its feed, a bioavailability of the divalent metal in the dry metal complex is different than the bioavailability of the divalent metal in either the dry metal carboxylate or the metal aminoate alone.
